

#### SIMATIC HMI Unified Comfort Panels

### Hardware for the future of visualization

The new generation of high-end HMI devices that range in size from 7 to 22 inches are part of the SIMATIC WinCC Unified system. Compared to the predecessor devices, the new generation offers numerous improvements with regard to performance, openness and ease of use.

Thanks to the capacitive glass front with multitouch technology, the Unified Comfort Panels are as easy to operate as a smartphone or tablet. Vibrant colors and high contrasts improve the readability of the display and the user friendliness.

The visualization on the devices is based on SIMATIC WinCC Unified, the new visualization system in the TIA Portal. It offers users many new possibilities and functionalities across all device sizes.

The option to extend the functionality of the devices through apps is generally new in the SIMATIC HMI product portfolio. Up to now, HMI Panels were used exclusively for visualization software. Thanks to the integration of Siemens Industrial Edge, users can now run other programs at the same time in addition to the standard device functionality. This makes for quick and easy implementation of project-specific requirements.

### Highlights

#### Size doesn't matter

· All six sizes of the Unified Comfort Panels offer the same number of hardware interfaces as well as the same functionality. All you have to do is choose the panel size.

## Easy to use thanks to multi-touch

• Smartphone operation is the benchmark: Thanks to multi-touch technology, controlling the Unified Comfort Panels is as simple as it is elegant, offering maximum convenience with high contrast and the best readability.

## Remote access via web client

The maintenance-free web client enables flexible remote access to the visualization, independent of local operation at the device. Access is via the web browser without additional software.

## Siemens Industrial Edge-enabled

The new SIMATIC HMI Unified Comfort Panels are Edge-enabled. This opens up completely new possibilities, such as functional expansion through apps, and the
processing and analysis of data directly at the machine.

# Security Integrated

• The proprietary operating system – based on SIMATIC Industrial OS – enables maximum security. Unneeded interfaces and system apps can be disabled or uninstalled. Despite openness and expandability, the panels are more secure than ever before.
